

CLAIMS

What is claimed is:

1. A multi-purpose hand tool, comprising:
a socket body, the socket body including a first socket at a first end of the socket body
and a second socket connected to a second end of the socket body; and
a shaft arm connected to the socket body.
2. The tool of claim 1, wherein the shaft arm is connected perpendicular to a longitudinal axis of the socket body.
3. The tool of claim 2, wherein the socket body is cylindrical.
4. The tool of claim 2, wherein the shaft arm includes a multi-sided key shaft arm.
5. The tool of claim 2, wherein the multi-sided key shaft arm includes a hex key.
6. The tool of claim 1, wherein:
the first socket defines a first opening for receiving a first fastener to be turned by the tool; and
the second socket defines a second opening for receiving a second fastener to be turned by the tool, wherein the size of the first opening does not equal the size of the second opening.

7. The tool of claim 1, wherein the first socket is detachably connected to the socket body.
8. The tool of claim 7, wherein the first socket includes a self-forming socket.
9. The tool of claim 1, wherein the shaft arm is welded to the socket body.
10. The tool of claim 9, wherein the shaft arm is disposed in an opening defined by the socket body.
11. The tool of claim 10, wherein the shaft arm is disposed around the socket body.
12. The tool of claim 1, wherein the shaft arm is cast to the socket body.
13. A multi-purpose hand tool, comprising:
a cylindrical socket body, the socket body including a first socket at a first end of the socket body and a second socket connected to a second end of the socket body; and
a shaft arm connected to the socket body such that the shaft arm extends radially from the socket body.
14. The tool of claim 13, wherein the shaft arm is connected at a longitudinal center of the socket body.

15. The tool of claim 14, wherein the multi-sided key shaft arm includes a hex key.

16. The tool of claim 15, wherein:

the first socket defines a first opening for receiving a first fastener to be turned by the tool; and

the second socket defines a second opening for receiving a second fastener to be turned by the tool, wherein the size of the first opening does not equal the size of the second opening.

17. The tool of claim 16, wherein the first socket is detachably connected to the socket body.

18. A multi-purpose hand tool, comprising:

a socket body, the socket body including a first socket at a first end of the socket body and a second socket connected to a second end of the socket body; and

means for torquing the socket body.

19. The tool of claim 18, wherein the means for torquing further includes means for turning a female fastener.

20. The tool of claim 19, wherein:

the first socket defines a first opening for receiving a first fastener to be turned by the tool; and

the second socket defines a second opening for receiving a second fastener to be turned by the tool, wherein the size of the first opening does not equal the size of the second opening.
